

ABSTRACT

A method, apparatus, system and signal-bearing medium, that saves a product code which enables use of a product on an electronic device. In various embodiments, the 5 product code may be saved in the electronic device or at a server, either when the product is initially loaded in the electronic device or at a later, for example, when an update is loaded or maintenance is performed. When the product code is subsequently needed, the product code is retrieved from its saved location. In this way, the user is freed from needing to save and locate product codes written in booklets or pieces of paper.
